

The better the team, the safer the Air Force mission

Safety is not a condition. It is the result of daily work. Good leadership and good decision making are the key factor for every team leader or commander who is responsible for the safe fulfilment of the task of his team. The balance between mission effectiveness and risk management often occurs in difficult situations, under time pressure and in a challenging environment. This means that the traits of each person are affected by stress. All crew members and commanders of our Air Force must be selected and well trained to take good decisions despite stress.

Gemasim is not only a perfect tool to strengthen performance under pressure for crew members including commanders of an airplane; it promotes also the safety referred effectiveness of every team leader and all staff members who are responsible for supervision.

Chief Flight Safety Swiss Air Force, Col Jürg Kobert
